WAVEBYTE ANNOUNCES GFX REVERB 1.0

Concord, CA, June 26, 2006 – Wavebyte today announced the release of GFX Reverb 1.0.

The GFX Series is a collection of DirectX® Audio Plug-ins designed for guitarists, with the look, feel and sound of classic guitar effects. The GFX Reverb 1.0 produces a wide variety of reverberant spaces with various tonal qualities, from small bright rooms to large dark halls.

Key Features

- Effect Control: adjusts the dry/wet mix; turn clockwise to increase reverb and counterclockwise to decrease.
- Time Control: adjusts the decay length of the reverb; turn clockwise to increase and counterclockwise to decrease.
- Tone Control: adjusts the tone of the reverb; turn counterclockwise to decrease the high frequency response.
- Level Control: adjusts the output level of the effect; turn counterclockwise from full clockwise position to decrease.
- LED On/Off Indicator: indicates if the effect is on or off.
- Foot (Mouse) Pedal On/Off Switch: toggles the effect on and off; left

Product Specifications

- Graphics Resolutions: 16, 24, 32 bit
- Sample Rates: 8,000 – 96,000 kHz
- Sample Formats: 16, 24 bit
- Internal DSP: 32-bit IEEE Float
- Plug-in Connections: mono to mono, stereo to stereo

About Wavebyte

Wavebyte, a privately owned company based in Concord, California, is a young company focused on the development of flexible, inexpensive, intuitive audio software for guitarists.
